PROFESSIONAL EXPERIENCE

Software Engineer (remote) (2018 - Present) Pro-Change Behavior Systems, South Kingstown, RI
Responsible for developing test strategies, defining requirements, validating test data, generating testing scenarios and creating testing frameworks to automate testing processes. Execute responsibilities working independently in remote location. Participate in weekly code reviews.

Key Achievements:

- Collaborated to develop Selenium (Nightwatch.js) testing framework, automating verification of data integrity in front-end component testing increasing efficiency and resulting in drastic reduction in required testing time and resources from dozens of manual hours to seconds.

Senior iOS Chat Advisor/iOS Team Manager Backfill (remote) (2012 - 2016) Apple, Providence, RI

Promoted through roles of increased scope and accountability, advancing from iOS Chat Advisor to role of Senior iOS Chat Advisor/iOS Team Manager Backfill.

Managed 20 chat advisor associates, leading weekly team meetings, managing individual key performance indicators and providing coaching and mentoring for skill enhancement and career development. Listened actively to customer concerns applying problem solving skills to identify root causes and resolve issues in a timely manner. Performed as point of contact for resolving customer escalations, deescalating frustrated customers, and resolving conflicts.

Key Achievements:

- Drove increase in team customer satisfaction score by 20% through effective coaching and mentoring to build customer service skills of staff.
- Achieved and sustained 100% satisfaction rating for two consecutive years as measured by Customer Satisfaction Surveys.
- Recognized as subject matter expert, delivering presentations on strategies to increase customer satisfaction to other teams within the company.

SELECTED PROJECTS

MovieSearch, <https://movieSearch.julmarfigueroa.com/>

Movie search application that provides users with integrated search functionality to search for their favorite movies using The Movie Database API. Through this application users can access movie details through the TMDb website and view movie trailers via YouTube.com.

Pixel Art Maker, <https://pixelart.julmarfigueroa.com/>

Web based coloring application for drawing customized pixel art. The application gives the user the ability to select a height and width size for their coloring grid and the functionality to choose a color from a selection of multiple color palettes.

Voiceinator, <https://voiceinator.julmarfigueroa.com/>

Speech Synthesis application created using JavaScript30. This application operates from the user's computer to read a selected text field to the user. The user is provided the capability to select the rate of speech and specific voice pitch they desire.

Omnifood, <https://omnifood.julmarfigueroa.com/>

Single-page landing site created as the foundation in the development of a website for a fictitious food delivery company. This project was created as an educational tool generated during the completion of one of Jonas Schmedtmann's full stack web development and design Udemy courses.
